

## SRX-PRO 3.3 SOFTWARE

- Built to meet the client's needs, specifications, and budget with optional features and functions
- Supports multiple network cameras on the market
- Optional dDisplay feature to project video onto external or spot monitor
- Controls up to 64 sensors/controls (inputs/outputs)

The SRX-Pro 3.3 is the i3 International's latest digital video management software. The enhanced features and functions of the SRX-Pro 3.3 will provide the best solution for the retail and commercial applications. SRX-Pro 3.3 software works both on hybrid and network video recorders. This software accepts both analog and IP camera inputs with different video formats: MJPEG, MPEG4, or H.264, for best video transmission over the Internet.

SRX-Pro 3.3 is flexible, adaptable, and user friendly and is uniquely designed to meet industry standards by integrating with multiple IP cameras, while utilizing video analytics to gather business intelligent data. i3 Annexus and other popular network cameras can be easily integrated with SRX-Pro through built-in camera search function. SRX-Pro software accepts a maximum of up to 64 network cameras (2MP) or a combination of up to 32 analog and 32 network cameras, or a similar combination based on customer's requirements and server hardware specifications.

SRX-Pro 3.3 integrates seamlessly with the i3 family of software and hardware products. The health status of multiple SRX-Pro servers can be monitored remotely through the Central Management Software (CMS). Optional video analytics module, VisionCount®, enables the power user to gather business intelligent data such as customer traffic, traffic distribution and dwell times. Complementary application, CMS can then combine the traffic data gathered by the VisionCount® with the POS transaction data to generate a variety of additional business reports such as store score card, conversion rate, average sales and average customer traffic. Built to fulfill the traditional requirement, optional dDisplay feature integrates with SRX-Pro 3.3 to display live video on multiple external or spot monitors. When required, SRX-Pro 3.3 can integrate with the i3's UIO8 Power-over-Ethernet devices to control up to 64 inputs and 64 outputs.

Rev.160825

SRX-Pro 3.3 is adaptable software that can reside on a number of dedicated computer servers. Customer's needs, budget and installation requirements will dictate what features and functions are enabled on their SRX-Pro 3.3 software through purchased software license. Optional intelligent features such as PACDM®, VisionCount® and VideoLogix® can be ordered at the time of purchase or at a later date. The number of supported audio channels and IP video channels is also determined by the purchased software license but can be, hardware permitting, updated at a later date.

SRX-Pro 3.3 is a user-friendly but also a highly secure application. SRX-Pro v.3.3 employs the LDAP technology and allows the authorized users to use their LDAP credentials to log into the SRX-Pro Server, which ensures that LDAP configured groups of users are given appropriate access to the Server setup and functions. The SRX-Pro 3.3 is accessible for remote view and search through Video Pilot Client, Internet Explorer and Smart Devices (iOS, Android, Blackberry).

Currently, i3 International offers two Server chassis models, pre-installed with SRX-Pro software: 4U Rack Mount and 4U Wall Mount with optional built-in PoE.

Users can also purchase SRX-Pro 3.0 software separately and use their own network video recorder server that meets or exceeds i3's minimum hardware requirements.

4U Rack Mount chassis supports up to 32TB of video storage in JBOD configuration and up to 21TB in RAID5 configuration, while compact wall mount chassis supports up to 12TB in JBOD.

i3 International is rapidly gaining the reputation of a security industry leader for its powerful and cost-effective solution of an open platform IP video surveillance software that has multiple usages and is suitable for various industries.

For over 25 years, i3 has continually remained on the technological and innovation cutting edge of the security industry by providing an easy-to-use, yet powerful digital video management software. i3's innovative video analytics and POS integrations have given their end-users even more tools in order to protect their organizations' assets, while also allowing them to use video intelligently to drive profit.

#### VIDEO SERVER MODELS AVAILABLE WITH SRX-PRO 3.0

##### **Hybrid Video Recorder:**

2L1600, 4i0000, 5i0000, 9i0000 with HR16 when required

##### **Network Video Recorder:**

2i0008, 4i0000, 5i0000, 9i0000

i3 recommended computer server - please contact tech support for model numbers and specifications.
